 Reg Price \$222.45

*ALL BOOST PACKAGES INCLUDE FREE SHIPPING

RENEW & BOOST is a 14-day comprehensive meal plan that guides you through steps for an Immune Boost, improved digestion, and better absorption. Using a systematic approach to renews metabolism, supports general health, and promote and encouraging reduction in pounds and inches when followed intentionally.

Guidance & accountability Video Tips are in [Face Book Group Evolve Life Results](#). Look for RENEW & BOOST tips in the topics section.

For an added BOOST, increased savings and a longer product regimen you can choose from the Weight Loss, Wellness and Performance BOOST packages to your left.

➤ **BOOST WEIGHT LOSS:** Adds what you need for an additional month of products to partner with the Team Evolve's BODY BURN Meal Plan System for continued weight loss. BODY BURN is found at www.EvolveLifeByDesign.com

➤ **BOOST WELLNESS:** These 3 valuable wellness products are shown in your RENEW & BOOST plan as optional products to add. They will last 30 days.

➤ **BOOST PERFORMANCE:** If you love to workout, then you seek endurance, strength and optimal recovery. Add **RUSH** pre workout, **REVITALIZE** during and **RECOVER** after. They will last for 20 workouts.

SMALL (S) = under 130lbs

MEDIUM (M) = 131-175lbs

LARGE (L) = 176-225lb

X-LARGE (XL) = 225+

Use all 4 FACTORS to determine your portion size:

FACTOR #1 Body Weight:

This is your starting point. You can move up or down depending on the next couple factors.

*Ex. Carmen's body weight is 165lbs, which means she will start on the **Medium** portion size. (see chart above)*

FACTOR #2 Meals Per Day:

Do you currently eat 1-2 / 3-4 / or 5-6 meals per day?

If you just finished another program successfully remain on the same portion.

1-2 Meals per day currently – decrease 1-2 portion sizes

3-4 Meals per day currently – decrease 1 portion size unless you feel you are an over eater

5-6 meals per day currently – stay at the same portion size as determined in Factor #1

Notes:

1) If you decide to move down two portion sizes but started at the medium or small in **FACTOR #1** move to the lower end of the **Small** on the Portion Chart.

2) When you're hungry for all 5-6 meals you may move up to the next portion size & continue moving up as your metabolism increased or at the appropriate portion size for your body weight.

FACTOR #3 Activity Level:

Do you work out? Intentional workouts are different than an active lifestyle.

If you exercise intensely for more than 7 hours per week – increase 1-2 portions sizes

If you exercise 5-7 hours per week – increase 1 portion size

- Activity like Yoga, Pilates, Barre and walking do not factor into increased portion sizes.

- If your weight is at the low end of a portion size then stay the same.

Ex. if your weight is 131 – 150lbs and you exercise 5+ hours a week then DO NOT increase a size.

However if your weight is 150 to 170 and you exercise 5+ hours then DO increase to large portions.

If you exercise 1-4 hours per week do not adjust your portions due to exercise

If you do not exercise decrease 1 portion size

FACTOR #4 Age:

Age can be a factor due to a natural decrease in lean body mass as we age.

Age 55-75 – decrease 1 portion

Over 75 – most cases do small portions

Move up a portion if hunger starts to increase in all 5-6 meals.

STEPS FOR SUCCESS:

- ONE DAY PRIOR to starting watch our **PREP VIDEO on Evolve Life Results Fb Group**
- Nutrition & Mindset Tips will be posted every other day & put in Topics under “Boost & Renew”
- Read through this packet and determine your portion size
- DAY 9 place **NEXT ORDER** if you want to continue structured weight loss w/ our **BODY BURN** Program.

KEY - RED: Required BLUE: Optional BOOST BLACK: Food YP: Your portion VT : Video Tip

Maximize results & education on what to expect. Each tip will be posted in the Topics section of Face Book Evolve Life Results

VT1:

Setting up a Mindset for Success!

Goal for the next 2 weeks and Preparation

- Have a food scale that measures in ounces. The more accurate you are the better your results will be.
- Use zip lock bags or Tupperware to pack meals. Prepack the night before to save time.
- Shop and prepare in advance so that cooking is done, and it makes for a quick prep per day.

Workouts - Do not workout on Day 1 or 8

VT2:

RECIPE Muffin Top Oats

Spacing your meals throughout the day 2.5 – 3.5 hours apart so blood sugar levels can stabilize.

Try to always eat close to the same times so that eating more meals starts becoming a habit. Some people find it helpful to set an alarm on their cell phone as a mealtime reminder.

Dairy - Lactose is sugar in milk. The Mōdere Vanilla **Meal Replacement Shakes** do not contain dairy or lactose. The proteins in this shake are plant based derived from Pea.

VT3

RECIPE - Sauces

No processed foods

Processed foods may not trigger hormones to tell the brain that you are full and contain many calories that have no nutrition to preserve shelf life. Eat nutrient dense whole foods outlined on the **“food portion chart”**
Do not skip meals, overeat or eat less than the required amount. Not eating is as much of a cheat as overeating.

VT4

RECIPE Yam Cones

Cooking ideas and best cooking temperatures

Get a good Teflon pan. This prevents sticking so you can cook and clean in a matter of seconds! Go to the store and get different spices. Try to stay away from the spices that have sodium contents over 200mg per ¼ tsp. McCormick’s makes a huge variety of different spices. Use these on your meats, carbs and veggies.

VT5

RECIPE – PBJ omelet & coconut coffee

Preparing for Body Burn

Your next step to continue with steady results, structure and accountability is moving to our Body Burn System! Learn what you need to do to take this step with us.

VT6

RECIPE – Chia Seed Pudding

Salt - Your salt will reduce from the removal of processed food and restaurant food. You can have salt, however, limit intake and keep it steady. Instead of table salt, we recommend to use small amounts of Himalayan Salt which is slightly lower in sodium than regular table salt and contains trace amounts of iron oxide, calcium, potassium and magnesium.

VT7

Digestion : Changes in diet such as increased protein or fiber can trigger constipation in some or exacerbate an ongoing issue. Carbohydrates are made up of simple sugars, which break down relatively quickly. Proteins are complex molecules that take longer to digest. The process of dismantling these chemical bonds and reducing the proteins to amino acids takes longer. Other things that can be the culprit of constipation are slow thyroid, painkillers, calcium, iron, antidepressants, blood pressure and allergy medications, diuretics and IBS. Diabetes can also cause nerve damage that can affect the ability to digest. Constipation and bloating usually pass as the body adjusts. Measures you can take to help are drinking 1 gallon per day, choose foods from your portion chart in **bold**, and if needed add Basil, flaxseed, chia, or fennel to your shake
Glycemic index (GI) and glycemic load (GL) offer information about how foods affect blood sugar and insulin. The lower a food’s glycemic index or glycemic load, the less it affects blood sugar and insulin levels. Not all fruits and carbohydrates are created equal. We have very strategically chosen fruits and carbs that will give you the best results.

VT8

Resetting your mindset for success

DAILY WINS ADD UP TO BIG RESULTS

Use the chart to track your weight and body measurements as outlined.

Take measurements in inches on both sides of the body (*where applicable*).
